Tech

Quikly is focused on using the right tools for the task at hand. Our main application is written in Ruby on Rails, but we also use Go, Node, Ember, and Angular.

We take pride in our team. We're scrappy midwest doers who aren't afraid to dive into situations that make us uncomfortable. We're small enough that you'll make an impact but big enough to know we're passed the honeymoon stage. Quikly HQ is located in downtown Detroit. We call the M@dison Building home (right across from Comerica Park).
